"Osstem - Future Technology and Superior Quality"

Products that dentists can trust.
That is the mission of
Osstem Implant.

**We deeply appreciate
all of our customers
who use our products.**

We deeply appreciate all of our customers who use our products. With population aging, rising incomes, and increased interest in health and aesthetics, implants have become an essential treatment in dentistry around the world. Today, implants are well-known as a safe and effective treatment option, and the leading treatment option for patients with no teeth. To satisfy this global trend, Osstem has invested heavily in R&D and continuously promotes innovative products, resulting in it becoming a global leader in technology and product quality. Osstem is releasing new products including TSIII CA, TSIII BA, SSIII HA, and MS SA, and is strengthening its product line-up in order to enable application in a variety of clinical cases. Other products to be released that will enable safe, easy implant procedures include SMARTbuilder, AutoBone collector, 123 KIT, and ESSET KIT.

TSIII CA in particular is expected to become a leading product in the global implant market after launching as a groundbreaking product with superior hydrophilic properties capable of at least 30% greater fusion than ordinary SA products due to its calcium ion solution encapsulation. Also, to improve our customers' convenience and foster reasonable purchasing, we have opened an online store, DenALL (www.denall.com), where dentistry materials can be purchased affordably and conveniently. Osstem leads the way in superior product quality and exports to over 50 countries including the USA, China, Japan, Germany, and India, and is the first company in Korea to record implant sales of over 30 million products and overseas subsidiary sales of over 100 billion won.

Osstem Implant CEO
Gyu-ok Choi (DDS, Ph.D)

Worldwide & History

1997

- 01 OSSTEM Co., Ltd. Founded
- 12 Launched "Doobunae" (health insurance claiming software)

2000

- 06 Launched "Hanaro" (dentistry management software)
- 10 Acquired Korean company Sumin Comprehensive Dental Materials

2001

- 01 Obtained CE-0434 certification
- 03 Established AIC Training Center

2002

- 01 Established Osstem Implant Research Center
- 08 Obtained US FDA certification
- 10 Launched SSII implant

2006

- 03 Changed company name to Osstem Implant Co., Ltd.
- 04 Obtained GOST-R certification in Russia
- 12 Established the first incorporation stage of overseas subsidiaries in 12 countries

2007

- 02 Listed on KOSDAQ stock exchange and began trading
- 06 Obtained GOST-R certification in Russia
- 12 Selected next-generation products
- Obtained certification from Australia's Therapeutic Goods Administration

2008

- 01 Established Osstem's osteology research center
- 12 Selected as a National Strategic Leading Technology Company

2009

- 10 Obtained permission from Japan's Ministry of Health, Labor, and Welfare to produce and sell medical devices

2010

- 03 Launched TSIII SA implant
- 06 Launched TSIII HA implant
- 08 Selected as WPM Biomedical National Policy Company
- 12 Exceeded 10,000 dentistry software members

2011

- 06 Selected Osstem Implant Research Center as an ATC (Superior Technology Research Center)
- 07 Selected as a world champion business
- 10 Obtained Health Canada certification
- 12 Launched K2 unit chair
- Selected as "Global First-Class Product"

2012

- 06 Launched TSIII CA implant
- 07 Established Osstem Medical Equipment Research Center

2013

- 01 Launched Osstem's xenograft "A-Oss"
- 09 Launched K3 unit chair
- 10 Selected as a hidden champion business

2014

- 05 Selected as a WorldClass 300 business

OsSTEM[®] Implant Design feature

Osstem Implant,
the leader in popularizing implants in Korea!
We stand out with our passion for strategic
R&D and best products, creating globally
trend-setting implants.

Packaging Color Information for Each System

• Submerged type implant with an Internal hex 11° taper connection structure

- Connection type and color - **Mini/Regular**
- Highest initial stability in soft bone by using upper-section small thread
- Corkscrew thread & cutting edge
 - Easy path adjustment through a superior self-threading effect
 - Acquires insertion torque with an increase in soft bone initial stability and without deviation according to the drill diameters
- The various body shape options are available according to the bone and patient's clinical condition
 - TSII (straight body): Easily adjustable insertion depth
 - TSIII (1.5° taper body): Able to acquire the initial stability needed for immediate loading even in soft bone
 - TSIV (6° taper body): Able to acquire superior initial stability only in maxillary sinus and soft bone
- Applied Surface - SA/CA/BA/HA

• Non-submerged type implant with an Internal octa 8° taper connection structure based on one-time procedures

- Connection type and color - **Regular/Wide**
- Corkscrew thread & cutting edge
 - Easy path adjustment through a superior self-threading effect
 - Acquires insertion torque with an increase in soft bone initial stability and without deviation according to the drill diameters
- The various body shape options are available according to the bone and patient's clinical condition
 - SSII (straight body): Easily adjustable insertion depth
 - SSIII (1.5° taper body): Able to acquire the initial stability needed for immediate loading even in soft bone
- Applied Surface - SA/CA/HA

• Submerged type implant with an external hex connection structure

- Connection type and color
 - **Mini/Regular/Wide/Wide PS**
- Corkscrew thread & cutting edge
 - Easy path adjustment through a superior self-threading effect
 - Acquires insertion torque with an increase in soft bone initial stability and without deviation according to the drill diameters
- The various body shape options are available according to the bone and patient's clinical condition
 - USII (straight body): Easily adjustable insertion depth
 - USIII (1.5° taper body): Able to acquire the initial stability needed for immediate loading even in soft bone
 - USIV (6° taper body): Able to acquire superior initial stability only in maxillary sinus and soft bone
- Applied Surface - SA

OsSTEM⁶ Implant Surface feature

Osstem Implant provides world-class surface technologies in surface treatment, the core implant technology for fast and safe procedures

• Provides optimum surface through acid treatment

- Provides Ra 2.5~3.0 μm surface roughness
However, upper section 0.5mm area is Ra 0.5~0.6 μm
- Achieved uniform micro-pit 1.3 μm in size
- 46% greater surface area compared to RBM

• Bone reaction performance (in-vitro and in-vivo)

- 20% improvement in osteoblast separation and ossification compared to RBM
- Initial bone reaction performance in animal model (mini-pig)
 - 48% improvement in initial stability (RT, 4 weeks) compared to RBM
 - 20% improvement in ossification (BIC, 4 weeks) compared to RBM

• Superhydrophilic SA surface encapsulated in calcium solution

- Maintains optimum surface identical to SA surface
- Surface activity maximized after encapsulated in calcium (CaCl₂) solution
- Increased ossification surface area through excellent blood wettability
- Improved bone reaction performance in the early osseointegration stage compared to SA surface

• Bone reaction performance (in-vitro and in-vivo)

- 3x increase in protein, cell adhesion compared to SA
- 19% increase in initial cell separation (7 days) compared to SA
- 34% improvement in initial stability (RT, 2 weeks) compared to SA
- 26% improvement in ossification (BIC, 2 weeks) compared to SA

• Surface coated with low crystalline Nano-HA in SA

- Ultra-thin film with HA coating and 10nm or lower thickness
- HA coating on SA surface (Ra 2.5~3.0 μm)
- Dual function of titanium and HA
 - HA is naturally removed during ossification process

• Bone reaction performance (in-vitro and in-vivo)

- Fused surface having advantages of both SA and HA
- Maintains advantage of SA optimum surface formation
- Superior early ossification of the HA in soft bone condition
- 30% improvement in ossification (BIC) compared to SA

• Premium surface coated with high crystalline HA

- High crystalline HA coating 30~60 μm in thickness
- HA coating on RBM surface (Ra 3.0~3.5 μm)
- Achieved at least 98% HA high crystallization
- Solves problem of interbody fusion in low crystalline HA

• Bone reaction performance (in-vitro and in-vivo)

- Excellent biocompatibility in HA that is similar to bone
- 2x improvement in osteoblast ossification (5 days) compared to SA
- 40% improvement in initial stability (RT, 4 weeks) in animal models compared to SA
- Suitable for weak bone tissue, or tooth extraction or implant insertion

TSII SA Fixture

- Submerged type implant with an internal hex 11° taper connection structure
 - Optimum screw thread design for SA surface to achieve consistent roughness
 - Straight body design for easy adjustment of insertion depth
 - Highest initial stability in soft bone by upper-section thread and body design
 - Powerful self-threading effect using corkscrew thread
 - Recommended insertion torque: 40Ncm or more
- ※ For a single posterior implant case, use of fixture at least 4.5mm in diameter is recommended

TSIII SA Fixture

- Submerged type implant with an internal hex 11° taper connection structure
- Optimum screw thread design for SA surface to achieve consistent roughness
- Taper body design with superior initial stability
- Highest initial stability in soft bone by using upper-section thread and body design
- Powerful self-threading effect using corkscrew thread
- Acquires the initial stability needed in immediate loading even in soft bone

Ultra-wide

- In implant cases for posterior tooth extraction and immediate insertion and replacing a failed implant
 - With its optimized apex design, capable of extracting a tooth and obtaining initial stability predictably even at the bottom 3mm
 - Recommended insertion torque: 40Ncm or more
- ※ For a single posterior implant case, use of fixture at least 4.5mm in diameter is recommended

TSIII HA Fixture

- Submerged type implant with an internal hex 11° taper connection structure
- Premium surface coated with high crystalline HA
- Taper body design with superior initial stability
- Highest initial stability in soft bone by using upper-section small thread
- Powerful self-threading effect using corkscrew thread
- Achieves high initial stability needed in immediate loading even in soft bone
- Recommended insertion torque: 35Ncm or lower
- ※ For a single posterior implant case, use of fixture at least 4.5mm in diameter is recommended
- ※ HA fixture usage not recommended due to possibility of coating layer cracks in hard bone and disbonding

TSIV SA Fixture

- Submerged type implant with an internal hex 11° taper connection structure
- Optimum screw thread design for SA surface
- Fixture for use only in maxillary sinus and soft bone
- Highest initial stability in soft bone by using more tapered body shape and deeper thread pitch
- Powerful self-threading effect using corkscrew thread
- Due to sharp apex design, even after D4 bone $\varnothing$ 2.0, $\varnothing$ 3.0mm drilling implant insertion is possible

Ultra-wide

- In implant cases for posterior tooth extraction and immediate insertion and replacing a failed implant
 - With its optimized apex design, capable of extracting a tooth and obtaining initial stability predictably even at the bottom 3mm
 - Recommended insertion torque: 40Ncm or more
- ※ For a single posterior implant case, use of fixture at least 4.5mm in diameter is recommended
- ※ TSIV fixture insertion is recommended at 15rpm or lower due to large thread pitch and higher insertion speed (or bone expansion feature)

EbonyGold screw : GSFSM (Ø 4.0 / Ø 4.0) : GSFSR (Ø 5.0 / Ø 6.0)				

Convertible GoldCast Cylinder

- Used in producing screw maintenance prosthetics
- After customization, prosthetic must be produced by casting using dental-quality gold alloy
- Cylinder region fusion range : 1400°C~1450°C (casting with non-precious metal alloys is incompatible)
- 1.2 hex driver
- Recommended tightening torque : 20Ncm
- Packing unit : cylinder + EbonyGold screw

Abutment + EbonyGold screw order code
: product code + WH (ex : GSGC500WH)

- Component
 - Block out spacer / denture cap connected black processing male
 - Replacement male blue/pink/clear
- Used after selecting retention males that are appropriate for the case
- Exchanged with male using a locator core tool
- Packing unit : 2set

LMPS

Locator® Black Processing Male

- Used in lab. process
- Packing unit : 4ea

LBPS

Locator® Block Out Spacers

- Gap sealing component between denture cap and abutment
- Packing unit : 20ea

LBSS

Locator® Replacement Male

- Retention: Approximately 6N
- Used in 0°~20° paths (two implant standard)
- Packing unit : blue replacement male 4ea

LRM06S

- Retention: Approximately 12N
- Used in 0°~20° paths (two implant standard)
- Packing unit : pink replacement male 4ea

LRM12S

- Retention: Approximately 22N
- Used in 0°~20° paths (two implant standard)
- Packing unit : clear replacement male 4ea

LRM22S

Locator® Impression Coping

- Used in taking impressions after attaching locator abutment
- Packing unit : 4ea

LICS

Locator® Extended Replacement Male

- Retention: Approximately 6N
- Used in 20°~40° paths (two implant standard)
- Packing unit : red extended replacement male 4ea

LEM06S

- Retention: Approximately 12N
- Used in 20°~40° paths (two implant standard)
- Packing unit : green extended replacement male 4ea

LEM12S

Locator® Lab Analog

- Achieves locator abutment on the model
- Packing unit : 4ea

LAL40S

Locator® Abutment Components

Locator® Core Tool

- Used in attaching and changing replacement males

Osstem Implant product information

Osstem Implant dental fixtures and products are manufactured using medical grade Titanium. Osstem Implant abutments, denture material and surgical tools are only compatible with Osstem fixtures. For more detailed information about each product, please refer to the user manuals, catalogs or please visit our corporate website (www.osstem.com). Please check all product labels for product codes, specifications, manufactured dates and expiration dates.

Sterility

Fixtures, cover screws and healing abutments are cleansed and gamma-sterilized. These products are disposable sterile medical appliances, and must be used in a sterile field. If the package is damaged or has expired, it must not be used. If the product package has been opened but not used, there is a risk of contamination and it is not recommended that the product resterilized and therefore should be discarded.

Storage conditions

Store all products in a dry place at room temperature (30oC). Avoid direct sunlight.

General precautions

Dental implant surgery require proper and formal training and education.

Cautions before dental surgery

Before dental implant surgery, a through patient health history review, oral and radiographic examinations must be completed to determine bone quality and proper treatment planning.

Cautions during dental implant surgery

Osstem Implant System are for single or two stage dental implant procedures. In order to minimize damage to the patient's tissue, special attention to temperature, surgical lesions and eliminating all sources of contamination and infection are needed. Any deviation from the standard surgical protocol increases the risk of failure. When inserting the dental implant, sufficient cooling must be introduced (water or saline) and excessive torque (greater than 55Ncm) can result in dental implant fracture or possibly bone necrosis. Placing dental implants greater than 300 has a very high risk of implant fracture. Direct pressure to the fixture should be avoided right after surgery. Immediate or delayed loading of the fixture must be determined after proper examination of the patient's bone condition and initial stability after placement.

"Mini" implants or implants with a diameter less than 4.0mm are not recommended for the posterior region.

Ultra-wide dental implants are recommended for the posterior region but should not be used with angled abutments. If considering an Ultra-wide dental implant, proper radiographic evaluation must be made to determine the bone mass and potential anatomical restrictions. Short dental implants (diameter greater than 5mm and shorter than 7mm) are only used for the posterior region. The clinician must

thoroughly evaluate the patient's condition and recognized the following issues: 1) bone loss due to peri-implantitis, 2) changes to the dental implant condition, 3) proper osseointegration determined by a x-ray examination. If there is movement or if there is bone loss more than 50%, removing the dental implant should be a course of action. Wide diameter implants should be performed as a two stage surgery. Sufficient healing time must be given before splinting with other implants or when loading. Immediate loading is not recommended.

Take care when placing dental implants with HA coating. The coating is prone to cracking or fracturing under high torque, therefore hard bone should be avoided and be inserted under 35Ncm of force.

CA and SOSI treated dental implants are encased in a solution to prevent the chemically treated surface from reacting with air. After removing the CA or SOSI dental implant, place the implant within 15 minutes to avoid degradation of the surface.

Warning

Improper patient selection and treatment planning may result in dental implant failure or loss of bone. Osstem Implants must not be used for purpose other than prescribed and must not be alter in any shape or form. Implant movement, bone loss, and chronic infections can result in implant failure.

Indications

Osstem Implant Systems are designed to replace a patient's tooth or teeth. They can be placed in both the maxillary and submaxillary alveolar bones and after full osseointegration can be restored prosthetically. Osstem Implant Systems offer both temporary and final prosthesis and can be retained by cement, screw, overdenture or fixed bridge.

Side effects

There are possible side effects after implant surgery (lost of implant stability, damage to dentures). These issues can be due to the lack of bone or poor bone quality, an infection, patient's poor oral hygiene, non compliance with post op procedures, movement of the implant, degradation of surrounding tissue, or improper placement of the dental implant.

Contraindications

Patients with the following contraindications are not eligible for dental implants: - Patients with blood clotting issues or issues with wound healing. - Diabetic patients - Patients that smoke or drink excessively - Patient's with compromised immune systems due disease or chemo and radiation therapy. - Patients with an oral infection or inflammation (improper oral hygiene or teeth grinding) - Patients with an incurable malocclusion/arthropathia and insufficient arch space.
